

Dear young Chinese:

Join the fight for a world worth living in!

No country plays a greater role in avoiding climate collapse because no country emits more greenhouse gases, not per person, but on a country level by far. We can not rescue the world without China, but you can not afford the world to fail if you want to prosper as we all do.

If science says an increase of 1.5° of global temperature is the maximum that we can somehow manage despite its already disastrous consequences, how can the old elites claim 2° more is an acceptable goal, especially once we have to realize that their promises will lead us actually into a future of 3 to 4° more. Even 2° means a future so disastrous for us, their children and grandchildren, that they would not want to live in it. Extreme droughts without rain, especially in northern China around Beijing, storms or other crazy weather will not be the worst. We are talking about collapsing ecosystems from corals to glaciers flooding our coasts, especially around Shanghai and Ningbo, and burning forests pumping even more carbon into the atmosphere in a death spiral for the world as they and we know it!

How can we feed 10 billion people in a world of drastic climate collapse?

Countries will collapse, wars for limited resources be fought, migration happen on an epic scale. China needs stability to prosper, how could that be achievable in a world like this?

If you believe that this is a ridiculous exaggeration than we have to disappoint you, it is the most likely outcome based on our scientific understanding of climate and nature, because the speed of the global temperature increase and the extinction of species is happening so fast while we are watching that we alter the face of the planet on a scale only comparable to the mass extinctions of the past, like the one that killed of the dinosaurs.

Good luck living in such a world. The Trump`s of the world do not have to worry about it, old as they are, as they will be dead in a few years anyway. But if you are young and do not want to live in a world collapsing in front of your eyes, like the dying corals in the Great Barrier Reef, than let this be known.

Support us in our demand for a Comprehensive Global Climate Stability Programme that limits global temperature increase to a maximum of 1.5° and not a bit more!!! If we cannot stop heating up the planet quickly enough, than we have to try to cool it. Ideas for that exist, it is time to use them to avert disaster!

Show your support by spreading the message to all your friends telling them to support us too, and by sending us your name or even better a photo of your face with your name added with this hashtag: **#coolthearcticnow**

Everyone of us is weak but we are so many and we have so much to lose that we can change the world together. Start doing so now. And maybe do not just start by posting your anger at a future that is stolen from us but think about your own way of living and how you can make a difference in your personal life!

And remember: As a mankind united we have a fighting chance, divided and distracted we won't.
