

A call for action for small island states:

Stop flooding our countries, we have a right to live, we have no future if sea levels rise dramatically!!

Stop the old rich men deciding the world`s fate without regard for our countries` survival!!!

Stop pretending that if science says an increase of 1.5° of global temperature is the maximum mankind can somehow manage despite its disastrous consequences, that the old elite`s aim of 2° more is an acceptable goal, especially once we have to realize that their promises will lead us into a future of 3 to 4° more. Even 2° means a future too disastrous for us. Extreme droughts without rain, killer storms or other crazy weather will not be the worst. We are talking about collapsing ecosystems from corals to glaciers flooding our coasts and annihilating our islands. And burning forests will pump even more carbon into the atmosphere in a death spiral for the world as they and we know it!

How can we feed 10 billion people in a world of drastic climate change?

Countries will collapse or simply cease to exist, wars for limited resources be fought, migration happen on an epic scale and we will be some of those migrants as we lose our homes!

If you believe that this is a ridiculous exaggeration than we have to disappoint you, it is the most likely outcome based on our scientific understanding of climate and nature, because the speed of the global temperature increase and the extinction of species is happening so fast while we are watching that we alter the face of the planet on a scale only comparable to the mass extinctions of the past like the one that killed of the dinosaurs.

Good luck living in such a world, the decision makers do not have to worry about it, old as they are, as they will be dead in a few years anyway.

But if you are young and do not want to live in a world collapsing or drowning in front of your eyes, like the dying corals in the reefs that protect your coasts, than let this be known to the elites and decision makers.

Support us in our demand for a Comprehensive Global Climate Stability Program that limits temperature increase to a maximum of 1.5° and not a bit more!!! If we cannot stop heating up the planet quickly enough, than we have to try to cool it. Ideas exist, it is time to use them to avert disaster!

Show your support by spreading the message to all your friends telling them to support us too and by sending us your name or even better a photo of your face with your name added with this hashtag [#cooltheartnow](#)

We will show it to the decision-makers and dare them to look into your eyes when they next time decide to betray you and drown your future!

Everyone of us is weak but we are so many and we have so much to lose that we can change the world together. Start doing so now.
